TITLE: Automatic prescription filling, sorting and packaging system

Brief Summary Text (6):

While the advantages of such a system are apparent, there are a number of problems which have to be solved in order to automatically fill and combine multiple prescription orders into a single package. The multiple parts of an order have to be brought automatically into close proximity at a packaging location. There is a need to place literature about the prescriptions in each shipping container along with the prescription. Any system which automatically distributes drugs must have a number of controls and checks to insure that the correct prescription is filled into the correct bottle which has been labeled correctly and the correct bottle is placed in the correct shipping container. Any deviation from the correct operations and handling of the prescription could be expected to have serious consequences. Lastly, in order to be economical for its intended purpose, the system must operate a high volume throughput.
